FOREWORD

Message from the Administration

The first four months of 2026 put the business back into profit after two difficult years. Net revenue reached €36.9 million, up 100.8 percent on the same period last year, and EBITDA came in at €7.1 million, a margin of 19.2 percent that would have looked out of reach for most of 2023 and 2024. We want to walk through what is behind that turnaround and what still needs work.

The growth is broad-based rather than a one-off. Monthly revenue has run between €10.9 million and €11.7 million since January, continuing the recovery that started in 2025 after two years of losses driven by a cost base that had outgrown the business. 2025 closed with EBITDA of €7.9 million and net income of €6.6 million, the first profitable year since 2022. The first four months of 2026 are already 46 percent of the way to matching all of 2025's profit.

The comparison against budget is not a fair one, and we say so plainly. The 2026 plan assumed a full-year EBITDA loss of €18.7 million, a budget built before the 2025 turnaround was confirmed. Measured against it, every profit line beats a planned loss by a wide margin, which tells you more about the plan than about execution. We have asked the finance team to prepare a mid-year reforecast so the second half is measured against numbers that reflect where the business actually is.

Not everything moved in our favor. Accounts receivable grew €27.7 million against €36.9 million of revenue, the largest single movement on the balance sheet, and collections need to tighten before this becomes a funding problem. Two data items surfaced by our own reporting also need attention before the figures are relied on without qualification: an inventory balance that is negative in the underlying ledger, which is not physically possible, and a €3.8 million gap between the cash figure on the balance sheet and the cash figure the cash flow statement closes at. Both are logged for correction and explained in section 9.

Our priorities for the rest of 2026 are to convert this profit into cash, bring receivables back to normal payment terms, complete the mid-year reforecast, and close the data quality items below. A number that raises a question is more useful to us than one that quietly answers it wrong.

The Administration - Caliman Advisory SRL · July 2026

01 Executive summary

The business closed the first four months of 2026 with net revenue of €36.9 million, more than double the €16.6 million budgeted for the same period and 100.8 percent ahead of the €18.4 million recorded in the same months of 2025. Gross margin reached 57.1 percent against 21.7 percent last year, helped by a shift in mix toward higher-margin services work. EBITDA came in at €7.1 million, a 19.2 percent margin, where the budget anticipated an operating loss. Net income was €3.0 million, an 8.1 percent margin, up from €0.9 million in the same period last year.

The balance sheet is larger and somewhat less liquid than it looks at first glance. Total assets grew to €97.4 million from €85.8 million at year-end 2025, the current ratio improved from 1.31 to 1.59, and debt to equity fell from 0.80 to 0.73. Most of the asset growth, however, is accounts receivable, which nearly doubled from €21.0 million to €48.7 million. Until collections catch up, the improved ratios overstate how much of this growth has actually turned into cash.

Two points of caution sit behind these headlines. First, the budget baseline is unusually conservative - the full-year plan implies an EBITDA loss of €18.7 million for a business that has been EBITDA-positive every month since January 2025. A gap this large reflects the planning assumptions more than actual performance, and a mid-year reforecast is recommended. Second, two open data quality items (negative inventory and an unreconciled cash balance) are disclosed in full in section 9 and should be understood before individual balance sheet lines are relied on.

02 Income statement

Figures are year to date through 30 April 2026. Actuals are posted through April; the budget column covers the same four months, capped at the same month as the actual close so the two are comparable. The prior-year column shows January through April 2025. Deductions are presented net within revenue.

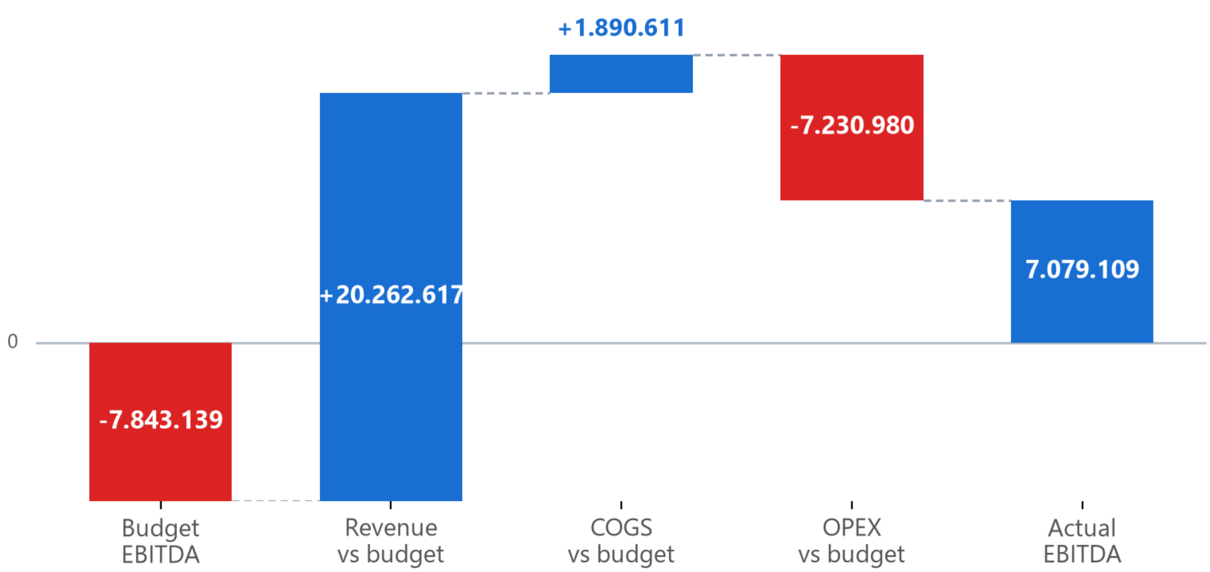
€ thousands	Actual	Budget	Var	Var %	PY (YTD 2025)
Gross Revenue	45.209	22.493	22.715	+101,0%	25.140
Revenue Deductions	8.309	5.856	2.453	+41,9%	6.762
Net Revenue	**36.900**	**16.637**	**20.263**	**+121,8%**	**18.378**
Total COGS	15.846	17.737	(1.891)	-10,7%	14.393
Gross Profit	**21.054**	**(1.099)**	**22.153**	**+2.014,9%**	**3.985**
Total OPEX	13.975	6.744	7.231	+107,2%	2.743
EBITDA	**7.079**	**(7.843)**	**14.922**	**+190,3%**	**1.242**
D&A	3.253	265	2.988	+1.127,4%	168
EBIT	**3.826**	**(8.108)**	**11.934**	**+147,2%**	**1.073**
Financial Result Net	3.203	(7)	3.210	n.m.	(47)
EBT	**7.028**	**(8.115)**	**15.144**	**+186,6%**	**1.026**
Income Taxes	4.028	622	3.406	+547,7%	159
Net Income	**3.000**	**(8.737)**	**11.737**	**+134,3%**	**868**

Var % is calculated against the absolute value of the budget base; where the budget was a planned loss or near zero, the variance shows as n.m. (not meaningful) and should be read from the absolute variance instead. Numbers may not add exactly due to rounding.

03 Variance analysis - actual vs budget

3.1 EBITDA bridge

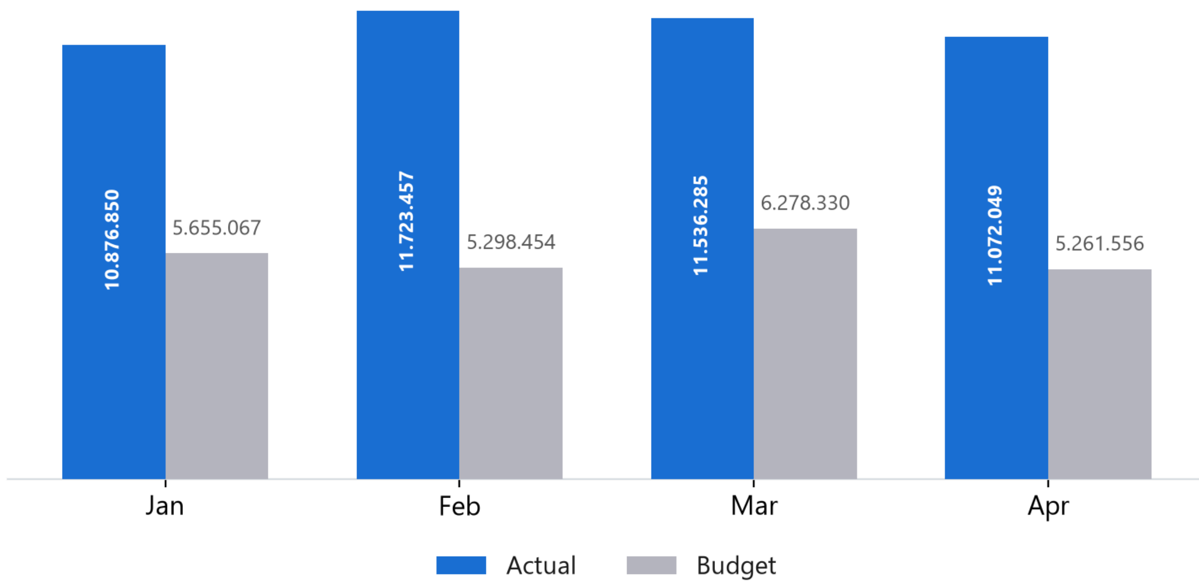
The bridge below walks from budgeted to actual EBITDA for the four-month period. Revenue explains essentially all of the gap. COGS came in €1.9 million better than budget even as revenue more than doubled, which points to a budget built on a materially different cost structure. Operating expenses ran €7.2 million over budget and absorb a meaningful share of the revenue upside.



Each bar floats on the running EBITDA total reached so far (dotted lines link one step to the next), so a step can cross the zero line even though its own value is entirely positive or negative. The number on each bar is that step's change, not the level it reaches.

3.2 Revenue - actual vs budget

Favorable variance of €20.3 million, or 121,8%, against YTD budget. Monthly actuals were stable between €10.9 million and €11.7 million of gross revenue, roughly twice the €5.3-6.3 million budgeted each month. The variance is even across the period rather than concentrated in one month, so it is not a timing effect - it is a budget set well below the run rate the business had already reached in 2025.

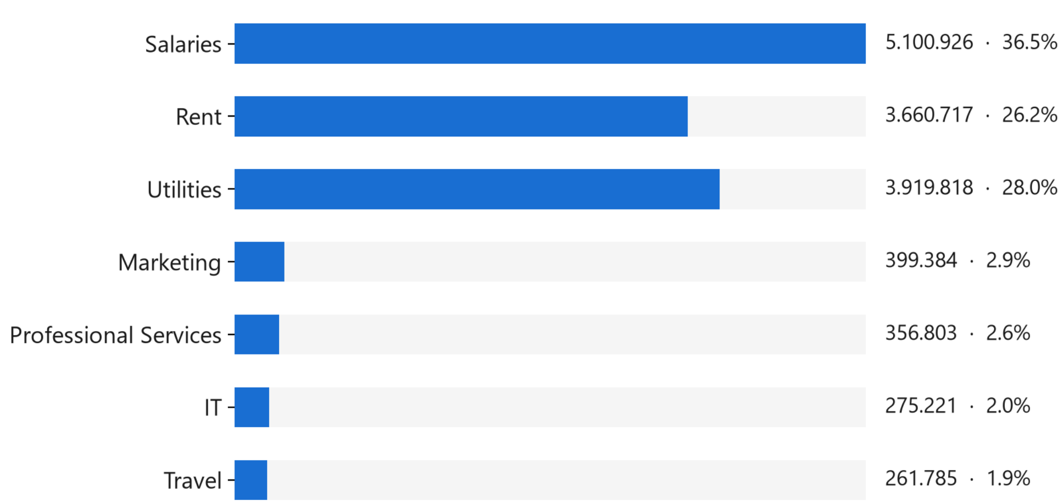


3.3 Cost of goods sold and gross margin

Favorable variance of €1.9 million, or 10,7% below budget. Gross margin of 57,1% sits well above the 21,7% recorded in the same period last year, consistent with the mix shift the Administration describes in the foreword. Action: validate account mapping for COGS before the next close, since a swing of this size against budget deserves a second look even when it is favorable.

3.4 Operating expenses

Unfavorable variance of €7.2 million, or 107,2% above budget. Salaries, rent and utilities make up 90,7% of total OPEX. OPEX held at 37,9% of revenue, broadly in line with activity, though rent and utilities are normally semi-fixed and should not scale with volume the way they have here. Action: investigate rent and utilities postings.



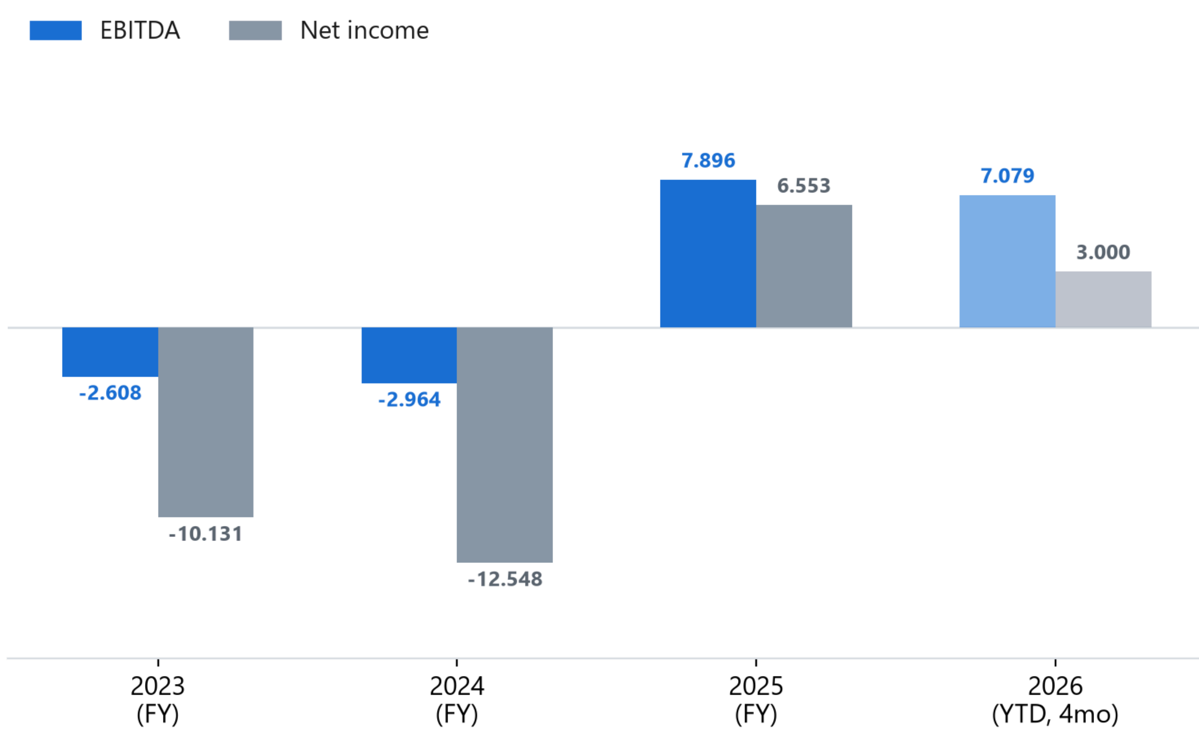
3.5 Below EBITDA

D&A of €3.3 million ran €3.0 million above a budget of €0.3 million, consistent with an asset base the plan did not anticipate. The net financial result was income of €3.2 million - financial income of €7.3 million against expense of €4.1 million - a genuine contributor to pre-tax profit rather than a drag. Income taxes of €4.0 million imply an effective rate of 57,3%, above the Italian combined IRES and IRAP statutory level and worth a review of its own.

04 Prior-year comparison

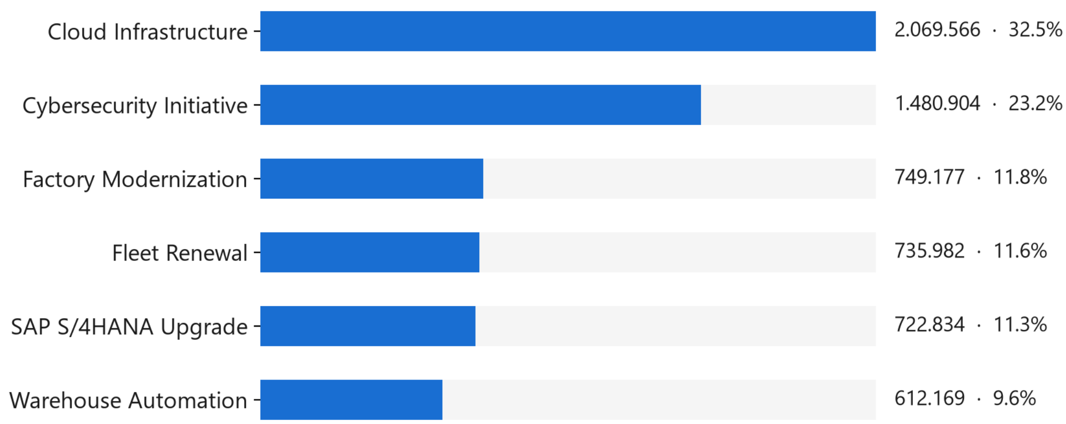
Net Revenue	+100,8%
EBITDA	+470,1%
EBITDA margin	+12.4 pp
Net income	+245,8%

Against January through April 2025, revenue grew 100,8% and EBITDA grew 470,1%, with the EBITDA margin up 12.4 points to 19,2%. Net income grew 245,8% to €3.0 million from €0.9 million, continuing the recovery that began in 2025 after two loss-making years. The multi-year picture below shows the same story at full-year scale.



05 Capital expenditure

The company completed a €6.4 million investment program during 2025, spread over six projects. Cloud infrastructure and the cybersecurity initiative absorbed 55,7% of the total, consistent with the shift of the delivery model toward hosted services. No new capital expenditure program has been committed in 2026 through April - investing outflows total €100 thousand against a €3.3 million depreciation charge, so the asset base is being consumed faster than it is being renewed. A renewal plan should accompany the mid-year reforecast.



06 Full-year outlook

The table below annualizes the four-month run rate with no seasonality adjustment, alongside the official full-year budget. This is arithmetic, not a forecast. The run-rate column should not be used for targets or compensation decisions. The recommendation stands: a proper mid-year reforecast with a reviewed financing schedule and tax position.

€ thousands	YTD Actual	Run Rate FY	Budget FY
Net revenue	36.900	110.700	48.003
EBITDA	7.079	21.237	(18.667)
Net income	3.000	9.000	(21.744)

Run rate = YTD actual × 3. The Navigation page ticker on the Power BI dashboard shows the same YTD figures used here.

07 Balance sheet

Position at 30 April 2026 versus the year-end 2025 close. Accounts receivable grew €27.7 million on €36.9 million of net revenue - the single largest movement on the balance sheet - and, if collections do not accelerate, will become a funding need in the second half. Inventory is shown below at its true ledger sign rather than masked: the balance is genuinely negative at 30 April 2026, which is not a physically possible position and is a real, unresolved data anomaly (see section 9). It was positive at year-end 2025, so this is specific to the current snapshot, not a longstanding issue.

€ thousands	30 Apr 2026	31 Dec 2025	Change
Cash & equivalents	1.623	1.675	(53)
Accounts receivable	48.685	21.000	27.685
Inventory (!)	(7.868)	8.000	(15.868)
Prepaid expenses	280	280	0
Current assets	**42.720**	**30.955**	**11.764**
Non-current assets	54.691	54.800	(109)
Total assets	**97.410**	**85.755**	**11.655**
Current liabilities	26.861	23.654	3.207
Long-term liabilities	14.337	14.400	(63)
Total liabilities	**41.198**	**38.054**	**3.144**
Equity	**56.212**	**47.702**	**8.511**
Total liab. & equity	**97.410**	**85.755**	**11.655**

(!) Inventory shown at true ledger sign, not masked - see section 9, item 01.

Key ratios

Current ratio	1.59
Quick ratio	1.30
Debt to equity	0.73
Net working capital	15.859

Net debt	39.575

Days sales outstanding computed at the 30 April 2026 snapshot currently returns an implausibly high figure (DSO 393 days); the standalone DSO/DPO measures behind this ratio do not yet respect the reporting-period date filter correctly and are excluded from the figures above pending a fix.

08 Cash flow

Prepared under the indirect method (IAS 7). Operating cash flow of €5.7 million comfortably exceeds net income of €3.0 million on the strength of the €3.3 million depreciation add-back. Investing activity was minimal at -€100 thousand; financing flows were near zero. Growth this period is largely self-funded from operations.

€ thousands	YTD April 2026
Net income	3.000
D&A (non-cash add-back)	3.253
Working capital & other	(586)
Cash flow from operations	**5.667**
Investing activities	(100)
Financing activities	(238)
Net cash movement	**5.330**
Free cash flow	**6.154**

The cash flow statement is internally consistent, but its closing cash does not tie to the balance sheet cash line - see section 9.

09 Basis of preparation & open data quality items

Every figure in this report comes from a synthetic dataset generated for the Executive Financial Statements Power BI project and does not describe a real entity. Amounts are in thousands of euros unless noted, extracted from the semantic model on 8 July 2026. Actual postings exist through April 2026; budget postings exist through December 2026. During preparation of this report, several measure-level defects were found and corrected directly in the Power BI model (a Deductions/Financial Result sign error that understated Net Revenue and mis-stated Net Income, and balance sheet card measures that used an unanchored lifetime cumulative sum instead of a point-in-time balance). The figures in this report reflect those corrections. Three items remain open and should be understood before relying on individual lines.

01 NEGATIVE INVENTORY

Inventory is -€7.9 million in the underlying ledger at 30 April 2026, positive at year-end 2025. A physical stock cannot be negative, so this is a posting error in the synthetic ledger, most likely COGS relief booked without a matching receipt. Section 7 shows it at its true sign rather than masking it with an absolute value, so current assets and equity are correspondingly understated by up to €7.9 million until this is corrected.

02 CASH CROSS-STATEMENT TIE

Cash per the balance sheet is €1.6 million, while the cash flow statement closes at €5.4 million, a gap of €3.8 million. Each statement is internally consistent on its own terms, but the two draw from different calculation paths in the model and do not tie to each other. Logged for correction.

03 DSO / DPO EXCLUDED

The standalone receivable and inventory measures behind days sales/payable outstanding do not yet respect the reporting-period date filter in every context and can return an implausible figure (DSO above 390 days) at a single-date snapshot. Excluded from this report pending a fix; the balance sheet ratios in section 7 do not share this defect.

A fourth item concerns the budget baseline itself: it implies a full-year operating loss for a business that has been profitable at the EBITDA line every month since January 2025. Variances of this size are not decision-useful. The practical recommendation is a mid-year reforecast, with variance reporting against that baseline for the remainder of the year.
